UNIVERSITY MEDICINE ASSOCIATES

PROTOCOL

EFFECTIVE DATE: July 9th, 2008

REVISION DATE: September 1, 2008, and March 26, 2018

SUBJECT: Lab requirements for Anticoagulation Clinic Patients

PURPOSE: Provide Guidelines for Laboratory Needs of Anticoagulation Patients

RESPONSIBILITY: Anticoagulation Providers and Nursing Staff

PROCEDURE:
1. New anticoagulation patients will have a complete blood count (CBC) drawn within 4 weeks of their initial visit. At the time of the initial visits new patients will have either a blood draw INR OR finger stick POC depending on the following criteria listed in line item 2.
2. Situations requiring INR via blood draw for laboratory testing include:
   a. Patients on enoxaparin (Lovenox)
   b. Antiphospholipid Antibody Syndrome
   c. Lupus Anticoagulant
   d. Hematocrit < 30
3. Any patient with a finger stick POC INR reading equal or greater than 5 will have a STAT venous specimen INR drawn by the clinic nursing staff and sent immediately to the laboratory for repeat testing.
