

Clinical Pathway for use of Fomepizole

*Poison Center consultation is available 24/7/365 at **1-800-222-1222** to assist in assessment and monitoring of poisoning cases. Each case may present with variations that may require variation from the above pathway. Clinicians are urged to consult as often as necessary to ensure optimum care. At times, our regional center may be busy with other calls. If this occurs, the call may roll to another regional poison center within the Texas Poison Center Network and callers may request to be transferred back to their own regional center for continuity of care.
