

# Pocket Guide for Antifungal Pharmacotherapy

## Antifungal Spectrum of Activity Against Common Fungi

| Organism                          | AmB | Flu | Itra | Vori | Posa | Isa | Anid | Caspo | Mica | 5-FC |
|-----------------------------------|-----|-----|------|------|------|-----|------|-------|------|------|
| <i>Aspergillus</i> species        | +   | --  | +    | +    | +    | +   | +    | +     | +    | --   |
| <i>A. flavus</i>                  | +/- | --  | +    | +    | +    | +   | +    | +     | +    | --   |
| <i>A. fumigatus</i>               | +   | --  | +    | +    | +    | +   | +    | +     | +    | --   |
| <i>A. niger</i>                   | +   | --  | +/-  | +    | +    | +   | +    | +     | +    | --   |
| <i>A. terreus</i>                 | --  | --  | +    | +    | +    | +   | +    | +     | +    | --   |
| <i>Candida</i> species            | +   | +   | +    | +    | +    | +   | +    | +     | +    | +    |
| <i>C. albicans</i>                | +   | +   | +    | +    | +    | +   | +    | +     | +    | +    |
| <i>C. glabrata</i>                | +   | +/- | +/-  | +/-  | +/-  | +/- | +    | +     | +    | +    |
| <i>C. krusei</i>                  | +   | --  | +/-  | +    | +    | +   | +    | +     | +    | +/-  |
| <i>C. lusitaniae</i>              | --  | +   | +    | +    | +    | +   | +    | +     | +    | +    |
| <i>C. parapsilosis</i>            | +   | +   | +    | +    | +    | +   | +/-  | +/-   | +/-  | +    |
| <i>C. tropicalis</i>              | +   | +   | +    | +    | +    | +   | +    | +     | +    | +    |
| <i>Cryptococcus neoformans</i>    | +   | +   | +    | +    | +    | +   | --   | --    | --   | +    |
| <i>Coccidioides</i> species       | +   | +   | +    | +    | +    | +   | +/-  | +/-   | +/-  | --   |
| <i>Blastomyces</i> species        | +   | +   | +    | +    | +    | +   | +/-  | +/-   | +/-  | --   |
| <i>Histoplasma</i> species        | +   | +   | +    | +    | +    | +   | +/-  | +/-   | +/-  | --   |
| <i>Fusarium</i> species           | +/- | --  | --   | +    | +    | +   | --   | --    | --   | --   |
| <i>Scedosporium apiospermum</i>   | +/- | --  | +/-  | +    | +    | +   | --   | --    | --   | --   |
| <i>Scedosporium prolificans</i>   | --  | --  | --   | +/-  | +/-  | +/- | --   | --    | --   | --   |
| <i>Mucormycetes</i> (Zygomycetes) | +/- | --  | --   | --   | +    | +   | --   | --    | --   | --   |

| Drug               | Reason              | Target Range (mcg/mL)                | Timing                |
|--------------------|---------------------|--------------------------------------|-----------------------|
| Itraconazole       | Efficacy            | >0.5 (prophylaxis), >1.0 (treatment) | Trough after 5-7 days |
| Voriconazole       | Efficacy & toxicity | >2 (efficacy), <6 (toxicity)         | Trough after 5-7 days |
| Posaconazole       | Efficacy            | >0.7 (prophylaxis), >1.0 (treatment) | Trough after 5-7 days |
| Flucytosine (5-FC) | Toxicity            | <100                                 | Peak after 3-5 days   |

### Therapeutic Drug Monitoring (TDM)

### Antifungal Mechanisms of Action

### Drugs of Choice

#### Candida species

Fluconazole or echinocandin  
Alternative: amphotericin B  
Consider echinocandins if extensive azole exposure or critically ill

#### Aspergillus species

Voriconazole  
Echinocandins not recommended for primary therapy  
Alternatives: amphotericin B, posaconazole, echinocandins

#### Cryptococcus species

Severe disease includes CNS and disseminated infection  
Severe: amphotericin B ± 5-FC  
Non-severe or consolidation phase: fluconazole

#### Blastomyces species & Histoplasma species

Itraconazole  
Severe disease includes CNS and disseminated infection  
Severe: amphotericin B

#### Coccidioides species

Fluconazole  
May consider higher doses of fluconazole up to 2 g/day  
Alternative: amphotericin B

#### Fusarium species

Voriconazole  
High rates of resistance to all available antifungal agents  
Alternatives: amphotericin B or posaconazole

#### Mucormycetes

Amphotericin B ± echinocandin  
Antifungal therapy is adjunct to surgical debridement  
Alternative: posaconazole

# Antifungal Pharmacotherapy by Class

Refer to Guidelines for Dosing in Renal Failure for renal dose adjustments

| Drug   | Dose                                 | Forms   | Interactions  | Significant ADRs   | Clinical Pearls  |
|--|--------------------------------------|---|---|--|--|
| <b>Polyenes - binds to ergosterol in fungal cell membrane, disrupting permeability and resulting in rapid cell death</b> |                                      |   |   |  |  |
| Amphotericin B deoxycholate<br>Fungizone®  | 0.7-1.0 mg/kg daily                  | Intravenous   | None  | Nephrotoxicity, K <sup>+</sup> and Mg <sup>++</sup> wasting, infusion-related reactions, anemia (long-term use)  | Saline loading may reduce nephrotoxicity<br>Premedications (acetaminophen, prednisone) may lessen infusion reactions<br>Meperidine can be given for rigors   |
| Liposomal amphotericin B<br>Ambisome®  | 3-6 mg/kg daily                      | Intravenous   | None  | Nephrotoxicity, K <sup>+</sup> and Mg <sup>++</sup> wasting, infusion-related reactions, hepatotoxicity, anemia (long-term use)                            | Less nephrotoxicity but similar efficacy<br>Infusion reactions include flushing, hypoxia, and chest or flank pain (can be reduced or prevented with diphenhydramine)   |
| Lipid complex amphotericin B<br>Abelcet®   | 3-6 mg/kg daily                      | Intravenous   | None  | Nephrotoxicity, K <sup>+</sup> and Mg <sup>++</sup> wasting, infusion-related reactions, hypoxia, hepatotoxicity, anemia, (long-term use)                  | Less nephrotoxicity but similar efficacy<br>Infusion reactions include flushing, hypoxia, and chest or flank pain (can be reduced or prevented with diphenhydramine)   |
| <b>Echinocandins - inhibits production of (1,3)-beta-D-glucan, an essential component in the fungal cell wall</b>        |                                      |   |   |  |  |
| Anidulafungin<br>Eraxis®   | 200 mg x 1, then 100 mg daily        | Intravenous   | None  | Histamine-mediated infusion-related reaction (uncommon)<br>Elevated LFTs but hepatitis rare  | Cidal against yeasts, static against molds<br>Poor CSF, urine, & eye penetration<br>Reduced activity against <i>C. parapsilosis</i> & <i>C. guilliermondii</i> ?   |
| Caspofungin<br>Cancidas®   | 70 mg x 1, then 50 mg daily          | Intravenous   | Increase to 70 mg daily with drug inducers (e.g. rifampin, efavirenz) | Histamine-mediated infusion-related reaction (uncommon)<br>Elevated LFTs but hepatitis rare  | Cidal against yeasts, static against molds<br>Poor CSF, urine, & eye penetration<br>Reduced activity against <i>C. parapsilosis</i> & <i>C. guilliermondii</i> ?   |
| Micafungin<br>Mycamine®  | 100 mg daily                         | Intravenous   | None  | Histamine-mediated infusion-related reaction (uncommon)<br>Elevated LFTs but hepatitis rare  | Cidal against yeasts, static against molds<br>Poor CSF, urine, & eye penetration<br>Reduced activity against <i>C. parapsilosis</i> & <i>C. guilliermondii</i> ?   |
| <b>Azoles - inhibits conversion of lanosterol to ergosterol, an essential component of the fungal cell membrane</b>      |                                      |   |   |  |  |
| Fluconazole<br>Diflucan®   | 400 mg daily (6 mg/kg)               | Tablets<br>Oral suspension<br>Intravenous           | <b>Inhibits 2C19, 2C9, 3A4</b>  | Generally very well-tolerated<br>GI effects, hair loss and alopecia<br>Elevated LFTs (rare)  | Higher doses (12 mg/kg) for <i>C. glabrata</i><br>Highly bioavailable, PO = IV<br>Alopecia more common with chronic use >400 mg/day  |
| Itraconazole<br>Sporanox®  | 200 mg TID x 3 days, then 200 mg BID | Capsules<br>Oral solution<br><del>Intravenous</del> | <b>Inhibits 3A4</b> , p-glycoprotein 3A4 substrate                    | GI effects (cyclodextrin in PO solution)<br>Hepatotoxicity, negative inotrope<br>Unique triad of hypertension, hypokalemia, and edema                      | TDM - add concentrations of itraconazole and active metabolite (hydroxyitraconazole)<br>Capsules - take with food & acidic conditions<br>Oral solution - take on empty stomach                                     |
| Voriconazole<br>Vfend®   | 6 mg/kg BID x 2, then 4 mg/kg BID    | Tablets<br>Oral suspension<br>Intravenous           | <b>Inhibits 3A4, 2C19, 2C9</b><br>2C19, 2C9, 3A4 substrate            | Visual disturbances (mild, transient)<br>Visual/auditory hallucinations<br>Hepatotoxicity, QT prolongation, phototoxicity, fluoride toxicity (periostitis) | “Rule of 30” - visual disturbances in 30% of patients, 30 mins post-dose, lasts 30 mins<br>IV - contains cyclodextrin which builds up with renal failure but unclear toxicity risk<br>Highly bioavailable, PO = IV |
| Posaconazole<br>Noxafil®   | 200 mg QID<br>400 mg BID             | Oral suspension                                     | <b>Inhibits 3A4</b>   | Generally well-tolerated<br>GI effects<br>Hepatotoxicity (rare)  | NOT equivalent to tablets or IV forms<br>Increased absorption with high-fat meal, acidic conditions, higher frequency (q6h)<br>No absorption benefit with >800 mg/day  |
| Posaconazole<br>Noxafil®   | 300 mg BID x 2, then 300 mg daily    | Tablets<br>Intravenous                              | <b>Inhibits 3A4</b>   | Generally well-tolerated<br>GI effects<br>Hepatotoxicity (potentially more than oral suspension)   | Tablets - no absorption issues with fat/acid but cannot be crushed<br>IV - contains cyclodextrin which builds up with renal failure but unclear toxicity risk  |
| Isavuconazole<br>Cresemba®   | 372 mg TID x 6, then 372 mg daily    | Capsules<br>Intravenous                             | Inhibits, 3A4, p-glycoprotein 3A4 substrate                           | Generally well-tolerated<br>GI effects<br>Hepatotoxicity   | Available as prodrug, isavuconazonium sulfate (186 mg contains 100 mg isavuconazole)<br>NOT formulated with cyclodextrin<br>May <u>shorten</u> QT interval (dose-related)  |
| <b>Fluoropyrimidines - blocks both DNA and protein synthesis in fungal cell</b>  |                                      |   |   |  |  |
| Flucytosine<br>Ancobon®  | 25 mg/kg q6h                         | Oral capsules<br>Oral suspension (compounded)       | None  | Mild GI effects<br>Bone marrow suppression (leukopenia, thrombocytopenia, pancytopenia)<br>Hepatotoxicity  | NEVER give as monotherapy (rapid development of resistance)<br>Dose adjustments based on renal function, toxicity, and TDM   |
